

Run Your Peppol Network With Confidence

Service Metadata Publisher (SMP) by DEX gives you complete visibility, control, and intelligence to manage your network effortlessly.

Total Visibility

Full Control

Peppol-Ready

Centralised Intelligence ALL IN ONE BITE

DEX SMP goes beyond baseline metadata publishing. It gives you the tools to govern your network, onboard Access Points (APs) efficiently, and extend into compliance and tax reporting workflows. All from a single platform.

Dashboard and Insights

Your network, always in view, and always actionable. Real-time metrics across participants, AP activity, tax compliance activation status and software provider adoption. Proactive alerts flag AP certificates approaching expiry and identify APs with no recent portal or API activity, sending signals before issues escalate.

Unified AP Management

One screen to govern your entire AP network. Live view of every accredited AP: participant counts, status, last active date and full AP profile without switching screens.

Software Provider Governance

Define a centralised software provider registry, where each AP can tag a participant to the software provider, enabling adoption tracking and network quality control.

Flexible Identity Verification

OpenID Connect (OIDC)-compliant identity verification. Plug in any national or enterprise identity provider without rebuilding the core flow.

Tax Compliance Activation

The Peppol 5-corner model is where e-invoicing meets tax compliance. Enable end-to-end activation with a full audit log at every step.

SMP - The Foundation

Participant registration, AP configuration, document type management, secure API access and role-based access control, all pre-integrated and synchronised with the Peppol Service Metadata Locator (SML). Complemented by a nationally operated Peppol Directory, giving the network its own resilient, locally controlled public presence.

Why do you need it?

Today's e-invoicing networks demand more than a participant registry. Whether you're a Peppol Authority operating a national SMP or a private SMP provider serving a growing network, the complexity of managing APs, tracking adoption and maintaining compliance grows with every participant you onboard.

Insights stacked into one dashboard

DEX SMP turns that complexity into clarity.

On the dashboard, you manage:

Network Growth Metrics

Track total APs, participants, new registrations, and monthly deltas. Always know how your network is growing.

AP and Solution Provider Activity View

Monitor active APs and solution providers in real time. Flag at-risk and idle accounts before they become operational issues.

Solution Provider Adoption Breakdown

Track participant registrations by solution provider. Identify who is driving adoption, who isn't, and where to focus your outreach.

Proactive Alerts

Receive automatic alerts for AP certificate expiries and network anomalies so your team can act early, not reactively.

Publisher. Provider Console. Intelligence Layer.
